SUMMARY

Computer Science senior at the University of Kentucky (May 2026) with certificates in AI and Cybersecurity and a Mathematics minor. Experienced building full-stack web applications using React, Node.js, FastAPI, and cloud backends. Seeking fullstack development or software engineering roles where I can bring strong fundamentals, a bias for shipping, and genuine curiosity about how systems fit together.

EDUCATION

University of Kentucky

Bachelor of Science in Computer Science

Minor in Mathematics • Certificates in Artificial Intelligence & Cybersecurity

Lexington, KY

May 2026

Relevant Coursework: Database Systems, Software Engineering, Computer Networking, Algorithm Design, Data Science

PROJECTS

UK HealthCare Staffing Tool

Jan 2026 – Present

React (Vite) • FastAPI • SQLAlchemy • Python • REST API • GSAP • [GitHub](#)

- Collaborating with UK HealthCare as client to design and deliver a production-ready full-stack employee scheduling application for clinic managers, as part of the University of Kentucky CS499 capstone.
- Built a Gantt-style scheduling interface enabling managers to assign staff to time blocks, manage roles, and export schedules — with GSAP animations for smooth UI interactions.
- Architected a React + Vite frontend communicating with a FastAPI/Python backend via REST API; database layer uses SQLAlchemy ORM with APScheduler for automated reminders.
- Contributing to a team of four through full development cycle: requirements gathering, iterative builds, and client-facing demos.

RelaTime — Relationship Graph + Timeline Web App

May 2025 – Present

React 19 • Vite • Node.js • Cytoscape.js • Neon Postgres • JWT Auth • Vercel • <https://rela-time-timeline-tool.vercel.app/>

- Designed and built a full-stack web app that visualizes how relationships between entities evolve over time, combining a force-directed graph (Cytoscape.js + cytoscape-cola physics) with a snapshot-based timeline.
- Implemented user authentication (bcryptjs + JWT), cloud project storage (Neon serverless Postgres + Vercel Blob), and a local-first ZIP save/load system — so the app works with or without an account.
- Architected state management with React Context across 20+ components, including a dynamic node details panel with custom field types, per-type styling, and context menus on nodes, edges, and timeline ticks.
- Deployed to Vercel with serverless API routes; active deployment.

PokemonPGC — Pokémon Post-Game Checklist & Dex Tracker

October 2025 – Present

React 18 • Vite • Vanilla JS • Node.js • Prisma ORM • CSS • <https://ppgc-delta.vercel.app/>

- Built a feature-rich web app for tracking Pokémon game completion — covering per-game checklists, regional/national Pokédexes, event distributions, shiny tracking, and collectibles across multiple titles.
- Migrated a large vanilla JS codebase to React 18 + Vite — React now owns the app shell, routing, sidebar, and newer UI; legacy modules still power task rendering, persistence, and the store, with a bridge layer connecting the two.
- Implemented complex UI patterns including radial/grid form layouts, cross-dex sync, shiny sprite toggling, tiered task tracking, and optional Prisma-backed API routes for multi-device account sync; actively updating.

Website Audience Analysis — Global Career Accelerator × Recording Academy (GRAMMYS)

Jul 2024

Tableau • Data Storytelling

- Analyzed artist and production industry data for the Recording Academy, designing Tableau dashboards that surfaced recognition trends across award categories.
- Translated raw industry data into visual narratives for non-technical stakeholders, practicing data storytelling under a real-world brief.

Microsoft Excel · Data Analysis

- Partnered with Intel to analyze U.S. regional sales performance, identifying cross-market patterns and delivering actionable findings through collaborative peer presentations.

EXPERIENCE

Desk Clerk

Feb 2024 – Present

University of Kentucky Housing • Lexington, KY

- Serve as first point of contact for residents, enforcing facility policies and documenting incidents with accuracy in a high-traffic environment.
- Provide consistent customer service and conflict resolution, building communication and problem-solving skills under pressure.

Retail Associate

May 2024 – Aug 2024

Kohl's • Blue Bell, PA

- Assisted customers across departments with purchases, exchanges, and Amazon returns in a fast-paced retail environment.
- Collaborated with team members on shipment processing, restocking, and maintaining presentation standards.

Server & Dishwasher

Sep 2020 – Sep 2021

Boston Style Pizza • Lansdale, PA

- Delivered attentive dining service and coordinated with kitchen staff to maintain accuracy and food safety standards during busy shifts.

LEADERSHIP & VOLUNTEERING

Vice Cadet Commander

Aug 2018 – Jun 2022

North Penn High School AFJROTC • Lansdale, PA

- Led and coordinated activities for 80+ cadets, managing logistics for community events, parades, and color guard displays.
- Accumulated 360+ hours of community service; built leadership, scheduling, and accountability skills over four years.

Cadet

Aug 2022 – Sep 2023

University of Kentucky AFROTC • Lexington, KY

- Participated in leadership training emphasizing structured communication, peer coordination, and accountability.

TECHNICAL SKILLS

Languages: JavaScript, Python, Java, C, C++, SQL, PHP**Frontend:** React, HTML, CSS, Vite, GSAP**Backend & Databases:** Node.js, Express, FastAPI, SQLAlchemy, Prisma ORM, Neon (Postgres), REST APIs**Tools & Platforms:** Git/GitHub, Docker, Vercel, VS Code, Linux, Tableau, Excel**Areas of Study:** Artificial Intelligence, Cybersecurity, Data Science
